

Claims 1-13 are pending in the application. In the OA, on p. 4, the Examiner indicated that the subject matter of claim 10 is allowable because none of the cited prior art provides “a small penetration opening for barometric  
5 pressure equalization”.

Since all claims in the application now comprise subject matter indicated  
10 as allowable over the prior art, Applicant respectfully requests that all rejections  
to the present application be withdrawn and that a timely Notice of Allowance be  
issued in this case.
